

We are looking for:

Quality assurance engineer

Location : Karlsruhe (HQ), Germany

Karlsruhe offers technology, science and quality of life.

About us:

Since 2012, ABOX42 successfully offers international B2B TV Solutions. As a technology partner, ABOX42 delivers TV and VOD platforms with hardware and cloud services to cable network operators, FTTH providers, Internet service providers, and telecom companies.

Our portfolio ranges from the design and manufacturing of Smart Set-Top Boxes to fully hosted and fully managed end-to-end life-cycle-management services in the cloud.

ABOX42 also combine the Smart TV world with the capabilities of Smart Home and IoT.

We are a 42+ team in Germany, Hong Kong, Shenzhen, United Kingdom and Eastern Europe with men and women who make things happen together. As a team we share values and goals.

We are looking for:

People with the same mindset, people who have already proven that sporty goals and challenges are two important things in their lives.

Through daily communication with our product management, the team knows the common product objectives and latest developments in the market that affect our products. Everyone on the team wants to be close to the "pulse of the products" and also uses these products at home.

Because of our own requirements as a team and the requirements that our demanding customers have, our goals are also linked to constant learning in new areas. One of the strengths that characterizes us.

But our flexibility as a team also characterizes our success. We quickly respond to changes in the requirements in a well-balanced manner. A property that is highly appreciated by our customers and is represented by everyone in the team.

Product concepts are set up in a way that the team can act in their own responsibility when implementing these concepts. In addition to concepts, each individual in the team, with their roadmaps, progress tracking and quality assurance, creates a high degree of transparency for the daily progress of the implementation. This leads to a high acceptance of the results of each individual in the team.

And we're allowed to be happy, because the daily joy and the best care possible, offered in the company, is an important factor for our motivation in the team.

Your Role:

ABOX42 is searching for a highly motivated Quality Assurance Engineer who will be responsible for performing and improving tests on ABOX42's products.

Besides planning, coordinating and performing those tests, the role will also include the responsibility to create and execute concepts for new test setups or test setup enhancements.

Our ideal candidate brings expertise and interest in the area of software quality assurance and is excited to dive deep into latest technology and tooling to optimize our processes and ensure highest quality standards.

The role offers opportunities for enlarging the scope or contributing with new ideas in our growing environment.

You will be part of the Quality Assurance team which belongs to the Professional Services team. As member of this crew you will be involved in all services and products developed by ABOX42.

Your Qualification:

- 2-3+ years of experience as a quality assurance engineer in the software industry
- Solid understanding of methods applied in the software quality assurance process.
- „Hands-on“ and „can-do“ mentality.
- Good analytical skills.
- High sense of responsibility
- Fluent verbal and written English language skills
- Basic understanding of web development & network technology

Your Responsibilities:

- Installation, configuration & operation of test environments.
- Creation and execution of test plans.
- Analyzation and reporting of test results.
- Communication with stakeholder.
- Defects tracking

Does that sound exciting? Then you could be the new colleague in our ABOX42 team. We are looking forward to receiving your meaningful application with CV and references via email. You are welcome to name references.
